SCREEN+PLUS[®] CONTEMPORARY

ALUMINUM CUSTOM FRAMED INSERTS

Available in White and Almond:

Heavy Duty 3-1/2" x 1-1/4" no maintenance aluminum box frame is reinforced at each corner.

Will not twist or warp ensuring a lifetime of trouble free service.

Screen and Storm panels are in their own frame for easy installation and removal into the box frame.

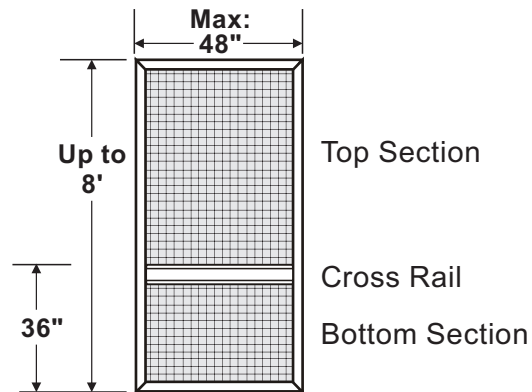

Any Size to Fit Your Openings

We custom build each insert to any size you specify on 1/8" increments up to the maximum and minimum specified for each model. Simply install your posts to a maximum width of 48", measure each opening, and give us the sizes.

We Offer 3 Models:

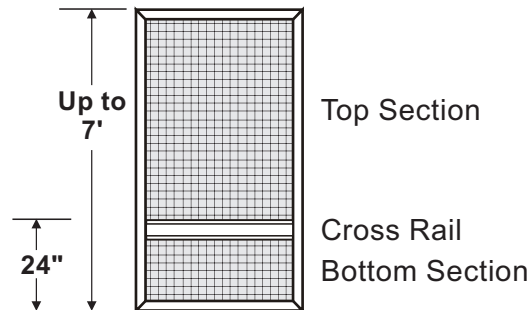

■ SP36

Cross Rail is 36" from bottom and maximum height is 8 feet.

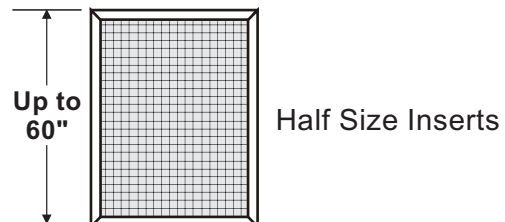

■ SP24

Cross Rail is 24" from bottom and maximum height is 7 feet.

■ SP60

This model is an upper section only for installation on top of an existing wall or a solid wall built on your foundation.. Maximum height is 60".

Description of Trim Stop Package

The trim stop package consists of $\frac{3}{4}$ " x $\frac{3}{4}$ " Solid PVC no maintenance trim.

Insert frame is held in place by being installed between the exterior and interior trim.

Screen+Plus inserts should not be attached to posts but allowed to "float" between trim stops. They are supplied long for final cutting by the installer to ensure a tight fit. Total of seven pieces supplied for each insert, three for the exterior and four for the interior.

Do not install trim at bottom on exterior as it could trap water.

Guard Rail Protection

Guard Rail designed to support load requirements listed in BOCA/IBC Building Code.

Same as a deck, the BOCA/IBC code requires fall-out protection when the floor of a screen porch is greater than 30" from the ground at any point. Often, carpenters have no alternative but to build a deck railing and install screening in front or behind the railings. This adds cost, obstructs your view, and is difficult to maintain.

With proper 4x4 post installation, our guard rail option can eliminate the need to install railings, saving you money, and allow an open unobstructed view!

Must use Fixed Tempered Glass below the crossrail to meet Guard Rail code.

The framing to which the Screen+Plus insert is attached must be designed to resist the minimum loads listed in your applicable building code. Artistic Enclosures is not responsible for designing this frame.

ALUMINUM CUSTOM FRAMED INSERTS

Solid Glass Storm Panels

In the top section, our storm panels use a full 1/8" thick glass; double the thickness of regular plate glass. Tempered glass is available as an option.

All bottom storm panels are standard with fully tempered safety glass, six times stronger than regular plate glass!

Storm panels fit into the same groove as the screen panel.

Solid Brass Clips and Thumbscrews

Our finely machined Solid Brass Thumbscrew and Clip fastens securely with machined threads into a brass insert in the aluminum frame.

Our system virtually eliminates stripping out the screw and the solid brass components will never rust or fail.

Operating Gliding Windows, Removable w/ Full Screen

We offer four models with operating windows that allow ventilation with a simple slide for ultimate 3 season use.

Both windows operate and are fully removable for maximum ventilation and easy cleaning.

Full screen is mounted in a separate track and can remain in place with windows removed.
